

## The Liberators use the bunq API to streamline business administration and power internal management dashboards.

The Liberators is a two-person company that helps organizations get rid of old-fashioned and dehumanizing ways of working, and switch to Agile, Scrum and Liberating Structures. They opened a bunq Business account in May 2018, automated their financial administration with the help of the bunq API in 2 days, and have enjoyed using bunq since.

### More than just a business bank account

The Liberators opted for opening a bank account at bunq because bunq offered a means for business innovation, not just a bank account. They utilized the bunq API to build custom automation solutions that let them focus on delivering value to their customers.

In just 2 days, the company developed connections of their bunq account with all the tools they use internally. In particular, they adopted the bunq API to do the following:

- build their own connector between bunq and Exact;
- make automatic reservations for VAT and other taxes to a separate bunq account;
- synchronize account balances to their management dashboards.

*"It took us between 2 and 3 days to integrate with bunq. The connector with Exact was the most difficult, mostly due to the documentation for their API. It was really easy to get the data from bunq."*

- Christiaan Verwijs, Co-Founder at The Liberators

The Liberators use more than 20 platforms to sustain their business. About a quarter of them are data fueled with the bunq API.

*"We use it with Exact primarily for our bookkeeping. For making VAT reservations, we have connected bunq with Harvest - our invoicing platform. Finally, we use Cyfe for reporting from the various platforms we use for our business (about 20-25)."*

- Christiaan Verwijs, Co-Founder at The Liberators

### Outcome

The company automated financial administration and freed up time for working on the international expansion of the business. In just one year, The Liberators managed to grow into an organization that reshapes industry giants and governmental institutions like KPN, LEGO, TomTom, and the Dutch Police.

### Quick facts

Adoption	January 2019
Integrated in	2 days
Languages	C#
bunq tools	bunq C# SDK
Developed the integration	Themselves
Goals	Automate financial administration Visualize financial data
Features built with the bunq API	Custom integration with the bookkeeping system Reservation of funds for VAT and other taxes Financial dashboards
Results	Tons of time saved for growing the business

*"The bunq API is different because it's all realtime! You scan an invoice, pay it and immediately see the account balance updated. Your administration is automatically updated in real time as well. Magic!"*

- Christiaan Verwijs, Co-Founder at The Liberators

*"bunq's API helped us reduce our time spent on tedious administration as well as keeping a close eye on our financials."*

- Christiaan Verwijs, Co-Founder at The Liberators
